Aditya Sriram M - **00:04**

Hey. Hi. Just hold on. Govind also will join. Hey. Hi. Yes. Yeah.

Govind Lotlikar - **01:50**

Hey.

Tanmay Bhowmick - **01:50**

Hi. Hi. Govind.

Govind Lotlikar - **01:53**

I can't hear you guys. Hello.

Tanmay Bhowmick - **01:57**

Hello.

Aditya Sriram M - **01:58**

I can hear both of you.

Govind Lotlikar - **02:01**

Govind, I can't hear you.

Aditya Sriram M - **02:08**

Problem.

Govind Lotlikar - **02:09**

One second. I'm going to connect from my mobile as well. Okay. Are you guys able to hear me?

Aditya Sriram M - **02:39**

Yes.

Govind Lotlikar - **02:41**

Oh great. One second.

Aditya Sriram M - **02:45**

You're able to hear now.

Govind Lotlikar - **02:46**

Go. Yeah.

Aditya Sriram M - **02:48**

Okay. Tanmay, can you also confirm?

Tanmay Bhowmick - **02:54**

Yes. Yes. Yes, I can hear you both.

Aditya Sriram M - **02:56**

Okay, cool.

Govind Lotlikar - **03:00**

Great. So let me kind of show you what. What I have done.

Aditya Sriram M - **03:08**

Okay.

Govind Lotlikar - **03:25**

It.

Aditya Sriram M - **03:51**

Okay. I shifted to the laptop.

Govind Lotlikar - **03:57**

Yes.

Aditya Sriram M - **03:58**

Okay.

Govind Lotlikar - **03:59**

One second. I'm going to share my screen, not the window.

Aditya Sriram M - **04:06**

Okay.

Govind Lotlikar - **04:26**

So I guess you're not able to see my screen.

Aditya Sriram M - **04:28**

Yes.

Govind Lotlikar - **04:31**

Okay.

Aditya Sriram M - **04:32**

Can you also confirm?

Tanmay Bhowmick - **04:34**

Oh yes.

Govind Lotlikar - **04:37**

Okay. Great. Okay. So see, this was the original architecture.

Aditya Sriram M - **04:48**

Okay.

Govind Lotlikar - **04:49**

Okay. The engine. Now I have simplified the design but the code has been more complicated. Okay. So this is the. This is the new design. Okay. It's. It's more simplified but the code is extensive. You know, over here and over here. And the prompt is huge. So I'll. I'll show you the output of this. Okay. So you know, initially what we had done was. Aditya. And you will confirm that were generating. One was the HTML file. Then were the consolidated.HTML file. The consolidated.JSON file. Okay. Then there was a report. Okay. These three files were getting generated and all the mismatches were getting updated in the report. Okay. Now when I was going through Sarvam. Okay. It suddenly struck me that. That instead of, you know, having those mismatches in the report why don't we show the mismatches directly in the HTML itself?

Aditya Sriram M - **06:11**

Yeah.

Govind Lotlikar - **06:12**

I was.

Aditya Sriram M - **06:13**

I was thinking about it. How to do it now. How to combine this information and do it.

Govind Lotlikar - **06:19**

Okay. So I. I have actually done this now. So what is going to get output are actually only two files. Okay. One is the HTML file.

Aditya Sriram M - **06:30**

Okay. Okay.

Govind Lotlikar - **06:32**

And second one is the report.

Aditya Sriram M - **06:37**

Okay.

Govind Lotlikar - **06:38**

Okay. So this is. This is the. This is the original file. I'll show this to you.

Aditya Sriram M - **06:49**

Okay. Okay. Wow.

Govind Lotlikar - **06:58**

Right? This is the original file. Okay. And what we are doing is we are generating version one of the HTML and the

report. Okay. These two files are getting generated. Okay.

Aditya Sriram M - **07:16**

Is there any specific Meaninging to version one?

Govind Lotlikar - **07:19**

Yeah. I'll tell you that. So this is. This is our report. It's concise and crisp.

Aditya Sriram M - **07:27**

Okay.

Govind Lotlikar - **07:28**

Okay. Version one. Yeah.

Tanmay Bhowmick - **07:40**

I just want to ask. This report is the final report which the client will get. Right?

Govind Lotlikar - **07:45**

So see, when he uploads the file, okay? He will start processing, right? So let's go over here. Okay, See, this is where, you know, the file is going to be sent through, okay. It is going through these two OCR engines. And this is the original file itself which is being fed in. Okay? So when it goes through this entire process, okay, at the end of this, these files are generated. These two files are generated, okay? So, so, you know, it's. It's like this. When you open a PDF to jpg, or I love PDF, you know, online, and you upload the PDF and you say convert to jpg, okay? It gives you a message, right? JPG has been converted. So this is exactly that. This is your file that was sent, okay? Total characters, these many mistral. Process these many characters.

Govind Lotlikar - **08:47**

PDF, process these many characters, okay? And this is 69 is the agreement level, you know, and integrity score is 66.37.

Tanmay Bhowmick - **08:59**

Okay, so just what I was asking is key. This is the final image, right? This is the final page. No, what a person is getting or it is also getting beautified afterward.

Govind Lotlikar - **09:12**

Yeah, I'll come to that. This is the first, this is the first report that will get generated once. Once the user processes.

Tanmay Bhowmick - **09:20**

Okay, this is not for the user. This is the internal system which is running, right?

Govind Lotlikar - **09:24**

System plus, you know, he also gets a summary of, you know, based on what kind of document he has given. Okay. Sometimes the document is very clear, sometimes the document is faded, sometimes there are stamps on it. Okay, so based on that, what was the agreement level? You know, ocr, parallel processing kind of a thing.

Aditya Sriram M - **09:50**

Okay.

Govind Lotlikar - **09:51**

Okay, we could.

Aditya Sriram M - **09:53**

Yeah, one question. Maybe I should wait, but let me ask the accuracy level, right? It is, yeah, 69% correct. But were aiming something around 95 plus.

Govind Lotlikar - **10:06**

Yes, yes, that is for, you know, clear documents. Now if you look at this particular document that we have taken, okay, look at all this noise inside. Are you seeing this? You know, so see all this noise? And luckily there are no stamps. But let's look at the next thing, okay? This will give you more confidence.

Aditya Sriram M - **10:35**

Okay.

Govind Lotlikar - **10:36**

Okay, so let's look at this HTML file. Okay, now see, this is the HTML file, okay, that has been created, okay, now see over here, wherever it felt that, you know, there was a mismatch, okay, Some of the mismatches, you know, See, this is showing 19. Okay, that means there were some mismatches which it has directly resolved. Okay? Plus it is giving me an option to directly edit over here also. Are you seeing this? Yeah, in the HTML.

Aditya Sriram M - **11:21**

Oh, this is the way admin can update the.

Govind Lotlikar - **11:24**

Yes, yes.

Aditya Sriram M - **11:26**

Can update his document.

Govind Lotlikar - **11:27**

Yes, yes. So we will have to show this side by side. Okay. This document one side and this document. Now we don't have three, we've got only two. Okay, getting it. So now this one is saying as auto resolved because it has already resolved this. Okay. But it is giving you what is the page number on which page this is coming on. Okay. Now if I see, say accept and remove. I'm. I'm okay with this. Accept and remove. It will remove. Okay, same thing. I'll go ahead. I say accept and remove. Okay. Now all of them have been done. If, if I think that, you know, I need to edit something anywhere, you know, I can just do this, say whatever I want to say. You know, I can do that. And when I save and export. Okay.

Govind Lotlikar - **12:31**

There are three files that are getting generated. One is a version two. Okay. Now this version two is without those mismatches. This is for the on demand download.

Aditya Sriram M - **12:47**

So this is all happening statically within the JavaScript logic.

Govind Lotlikar - **12:51**

Yes, yes, yes. Okay.

Aditya Sriram M - **12:55**

Yes.

Govind Lotlikar - **12:58**

Okay. So this is on demand download. Okay. Second document that is getting generated is the same version but is a text format. This will be fed into the Pine Cone.

Aditya Sriram M - **13:11**

Oh.

Govind Lotlikar - **13:12**

Because Pine cone is more comfortable with text.

Aditya Sriram M - **13:16**

Okay.

Govind Lotlikar - **13:17**

Okay. So we'll send this directly to Pine Cone. Okay. So search becomes easier. Okay. And the last one is the log. All the, all the ones that you know, we accepted. Okay.

Aditya Sriram M - **13:36**

The history. All the changes.

Govind Lotlikar - **13:38**

Yeah, all the changes. Now we're keeping this log because these have been accepted by the human in the loop. Okay. Okay. Now you know some of these did not show. I need to troubleshoot. You know why 19 was showing but

the ones before 19 were not showing.

Aditya Sriram M - **13:59**

Oh, okay.

Govind Lotlikar - **14:01**

Okay. So most of them are. See now look at this one. Like you know, let's take one example. Wherever there is Hindi or Marathi. Okay. It will automatically convert it into English.

Aditya Sriram M - **14:19**

Okay.

Govind Lotlikar - **14:21**

Okay. So this part I need to do a little bit of troubleshooting. Like all of these need to show, even if it is auto resolved, let the user in the, the human confirm that you know, it's okay. I am fine with this.

Aditya Sriram M - **14:38**

Okay.

Govind Lotlikar - **14:39**

So you know, whenever the human in the loo confirms. I don't know if I have that earlier one. No, I don't have that. It also gives you that option, you know, it will show you Mistral radio buttons on the side. You want to select Mistral. You want to Select PDF vector or there is one text box in that same HTML file. Okay. I mean I've been running it over and over. So in order to get a better one, I deleted those. But the last one that I saved it gave me fewer errors. Okay, but the log is capturing everything. See. All these errors? Okay. Now this particular file, this text file which I said this is the version 2 text file which is error free, right? This gets fed to. Pine cone. See, this is the feeder to the pine cone.

Govind Lotlikar - **16:08**

Now this is on form submission. But I'll. I'll be adding a webhook over here. And I'll give you the webhook which you can embed into the ui. Okay. So when I. When I run this. Okay. The pine cone. See, there are three fields that, you know, I'm. I am giving it. Let me just run it and show it to you. See the. The client name. Okay. This is one of the fields. Okay. The file itself. Right. And third one is what kind of file it is.

Aditya Sriram M - **17:06**

Yes.

Govind Lotlikar - **17:07**

Okay.

Tanmay Bhowmick - **17:08**

So this is the fourth step, right?

Govind Lotlikar - **17:11**

This is. This is. Once the final file is. Is updated then we need to feed it into the Pine cone, right? We have to create a rag.

Tanmay Bhowmick - **17:20**

Okay?

Govind Lotlikar - **17:22**

Okay. For creation of the rag. Okay.

Aditya Sriram M - **17:27**

Question.

Govind Lotlikar - **17:28**

Yeah.

Aditya Sriram M - **17:32**

So in this flow, right. Say for example, three users are there. Okay. For the, for the purpose of easy understanding, let's call them Govind Aditya. We are using the same workflow. I'm uploading a different text. You're uploading a different text. Tanmay is uploading his text.

Govind Lotlikar - **17:57**

Yeah.

Aditya Sriram M - **17:58**

So when we actually chart from the web app, right. We will get answers related to only our context.

Govind Lotlikar - **18:08**

Right?

Aditya Sriram M - **18:09**

It won't be intermixed.

Govind Lotlikar - **18:11**

So the. The question that I will ask you is are Govind Aditya and Tanmay three different people?

Aditya Sriram M - **18:21**

Yes.

Govind Lotlikar - **18:23**

Okay. I mean three different people in the same organization or three different people in sep. I mean owners of separate organizations.

Aditya Sriram M - **18:33**

Oh. So if it is same organization, they'll.

Govind Lotlikar - **18:37**

Be able to chat.

Aditya Sriram M - **18:39**

Yeah.

Govind Lotlikar - **18:39**

So even if it is same organization, we can, you know, the user, the UI will have different logins for them. Okay. They will upload their files. Correct. With a different customer name. Now over here, this, Govind and Aditya that you see. Okay. Are the client names, not the employee names. Because we need to ident. You know, we need to fetch data, resting it, restricting it to a particular client. Right?

Aditya Sriram M - **19:13**

Yes.

Govind Lotlikar - **19:14**

Are you getting me? So these are client names, the users, the number of users that, that will come through our super base access to how many customers we're giving. Okay. So let's say. Let's say you and I, we are. We are employees of an organization. Okay. But the customer's name is Tanmay. Okay. Customer's name is Tanmay. And. And maybe Karthik. So you are uploading files for Tanmay. Okay. So over here under client name you will. You will select Tanmay.

Aditya Sriram M - **19:55**

Okay.

Govind Lotlikar - **19:55**

Right. And I will select Karthik.

Aditya Sriram M - **20:00**

Okay.

Govind Lotlikar - **20:01**

And all these, once uploaded. Okay. They will be. We need to put them into a queue.

Aditya Sriram M - **20:09**

Okay.

Govind Lotlikar - **20:09**

Okay. Although parallel processing is possible for now what we'll do is, you know, we. We will need to send them one after the other.

Aditya Sriram M - **20:21**

So. Okay. Not an issue.

Govind Lotlikar - **20:24**

Yeah. So even if there are four or you know, five files which have been listed over there. Okay. Only after the first one says processed, the next one will be sent. That way, you know, we can make sure that it's not crashing. Okay. We want a good demo, right? We don't want it to crash. Okay.

Tanmay Bhowmick - **20:47**

Govind, just wanted to ask one thing. Maybe it's a silly question. I want to ask that all of these things has been developed, right? You have custom coded it, right? Or it is something which you have used with automation logics and AI. Is it. Is it something which you have developed or it is all. Is it something that you have managed to develop it with the help of AI?

Govind Lotlikar - **21:12**

So I'm not a coder. Okay. I'm a project manager by profession.

Tanmay Bhowmick - **21:16**

Okay.

Govind Lotlikar - **21:18**

So that the. The. This is my logic that's gone into it. Okay. And it's. It's refined over the period of last one month. You know, Aditya knows what we started off with. And slowly, you know, things changed. And what has now evolved is a refined version of that. So entire coding has been done by. By AI.

Tanmay Bhowmick - **21:43**

That. That's what I want to understand. Because I have skipped a lot of things to be very honest. So just wanted to understand. So this. You are not non coder and you have done it by your own self with the help of AI, right?

Aditya Sriram M - **21:55**

Yes. Yes.

Govind Lotlikar - **21:56**

Okay.

Tanmay Bhowmick - **21:56**

And this is all you have been taught with outschool sessions, right?

Aditya Sriram M - **22:01**

Yes. Okay.

Tanmay Bhowmick - **22:03**

Makes sense. I have to go back to the classes, I guess then I definitely need to go back to the classes. And I'm glad. I'm really glad that I have like connected with you people. Because I think I'm going to coordinate a bit more with Govind and Aditya. I guess rather going to Karthike.

Aditya Sriram M - **22:23**

Just to give you a context. Right. Tanma is from Cohort 4. Yeah. Some issue is unable to continue in Cohort 4 and in Cohort 5 he joined and is part. Part of our project.

Tanmay Bhowmick - **22:38**

Yeah. And Cohort 5 also that the Cohort 4 issue was continued and now I'm got bit free because Karthike coordinated with me. You have to get into a project and helped me enter this project with you guys which is already built. Thank you so much for that. And. And after that like Karthike told me that just go through with the classes again and come back like I haven't. So I left Learning after image generation almost I have completed yesterday also I have been learning about the image generation and video but I have not touched the automation part yet. So it's like. It's a lot like I have to learn. But I have few, but I. I do have few feedbacks for the process. I'll. I'll give the feedback by the end of this meeting.

Govind Lotlikar - **23:24**

Yeah.

Tanmay Bhowmick - **23:25**

And let's focus on the demo now.

Aditya Sriram M - **23:28**

Yeah.

Tanmay Bhowmick - **23:28**

Thanks so much.

Govind Lotlikar - **23:29**

Right. Right. So you know, of course the ui we'll see once I complete the, you know, the backend part. Okay. So Aditya, you. You're clear with this, right? So the customer name, the client names. Okay. And the type of document. Okay. Whether it's an agreement, it's an invoice. Okay. Even those which are related to any particular case will get uploaded over here. Right? Okay. So. So this is the feeder. Okay. And one second, my laptop's a little slow. Okay. So once this is run. What you see in Pinecone is.

Tanmay Bhowmick - **24:39**

Pine cone. Is what? Database management. What?

Govind Lotlikar - **24:42**

Yeah, it's. It's a. It's a vector database.

Aditya Sriram M - **24:46**

Okay.

Govind Lotlikar - **24:50**

So you remember customer name Govind.

Aditya Sriram M - **24:53**

Okay.

Govind Lotlikar - **24:53**

So we've mapped it to a namespace. Okay. All the files, okay. Which will be tagged under client name Govind. The records will go inside over here.

Aditya Sriram M - **25:05**

Okay.

Govind Lotlikar - **25:06**

Okay. That way we can fetch information related to a particular client.

Aditya Sriram M - **25:12**

Okay. One session or maybe one input.

Govind Lotlikar - **25:16**

Yeah.

Aditya Sriram M - **25:18**

Instead of the client name, right. Is will give the case id.

Govind Lotlikar - **25:27**

So there is some information that is being sent through metadata also. I'll show you.

Aditya Sriram M - **25:46**

So as part of the first process, we get a refined document. So as part of the second process, we feed that refined document into the vector database. Yeah. Vector database. And then we start using chat.

Govind Lotlikar - **26:05**

Yeah. So under the client name, okay. The client name was the namespace. Right. Which I showed you. Okay. The. The file name also gets connected.

Aditya Sriram M - **26:19**

Okay.

Govind Lotlikar - **26:21**

Okay. The file type gets connected and submitted at. Okay. And the id.

Aditya Sriram M - **26:38**

Okay.

Govind Lotlikar - **26:40**

Okay. So these are things that get connected to that particular namespace. A namespace is the highest level segregation that you can do in. Over here, in. In Pinecone.

Aditya Sriram M - **26:52**

Okay.

Govind Lotlikar - **26:52**

Okay. So my. My database name is Legal Aid. So under Legal Aid, go with this one customer and then we can have 100 customers more. And each customer will have all this metadata available.

Aditya Sriram M - **27:11**

Okay.

Govind Lotlikar - **27:12**

You know the file type, the file name submitted at. This information will be here. Okay. So as a part of the. The.

Aditya Sriram M - **27:22**

The reason why you. Why you're saying the client name is important because the users will have concentrated charts, right?

Govind Lotlikar - **27:33**

Yes. See, like for example, if I. If I am your advocate. Okay. And I am Tanmay's advocate. I don't want to have information from both the agreements. Both of your agreements. I only want information from Aditya's agreements.

Aditya Sriram M - **27:53**

Correct? Yes.

Govind Lotlikar - **27:54**

Right. I have to always mention that. Please give me the information related to this particular client. Because now I'm. I'm studying or you know, now I'm preparing data for a case which is related to Aditya, not.

Aditya Sriram M - **28:09**

And what if that particular client has multiple cases involved?

Govind Lotlikar - **28:15**

Yeah. So we call it. We call it. We can call it like, you know, Aditya Robbery, Aditya murder. That's something that you know. That's an identifier that we will have to state. Right? See, from the billing perspective it's going to be different, okay? Because now. Now there are. There are two particular cases which Aditya has brought to me. But when I want to segregate the documentation I have to keep it unique. Okay? Because one is related to murder, one is related to robbery. Right? So at the end of second we have a rag database. Okay? And then the third one, okay. And this could be our wow factor also. Okay? This is fetching and telegram included. Okay. So like over here, you know, I can. Like. For example, I want to ask a question. I'll just copy the same one. Okay.

Govind Lotlikar - **29:40**

Let's say who are the incoming partners? So there are existing partners and there are incoming partners. Okay. So I'm just sending this. Okay. See, it's. It's executing the workflow. Are you seeing this going through?

Aditya Sriram M - **29:58**

Yeah.

Govind Lotlikar - **29:59**

Not sure if you're able to see it, but.

Aditya Sriram M - **30:03**

No, I can see.

Govind Lotlikar - **30:06**

Okay.

Tanmay Bhowmick - **30:08**

I can see, but I can't understand. Guys,

Aditya Sriram M - **30:17**

I think Tanmay will have to study a lot of content.

Tanmay Bhowmick - **30:23**

And I have a direction because I'll see the project. I understand the project. And then go back to the session and understand how it might be made.

Govind Lotlikar - **30:32**

Well, let's. Let's. Let's go by your strengths. See, are you seeing this now? See the incoming partners. Okay. Are these guys.

Aditya Sriram M - **30:41**

Oh, super.

Govind Lotlikar - **30:43**

Okay, so this information was fetched from there. Okay. But let's say that you know, the. This is the. The wow factor comes from here. See, let's say that I am an advocate who's traveling to a customer's place.

Aditya Sriram M - **30:58**

Okay.

Govind Lotlikar - **30:59**

I have a client's place now I don't have my screen over here. Right. So what I'm.

Tanmay Bhowmick - **31:10**

How about go. Just left the chat, I guess.

Aditya Sriram M - **31:14**

Yeah, but I can still see his.

Tanmay Bhowmick - **31:17**

Because he used his mobile for the mic and screen for the laptop. I guess we have to. We have to let him know that I think he's still showing the demo. But we can't hear him. Give him a call or something, man.

Aditya Sriram M - **31:37**

Okay, okay,

Tanmay Bhowmick - **31:59**

I have to give him a call.

Aditya Sriram M - **32:02**

No, no, that's fine. That's fine. I think he's still here showing up. I'll ping him. Okay, Let me call you. Excuse me.

Govind Lotlikar - **32:54**

Yeah. Did I get dropped?

Aditya Sriram M - **32:55**

Yeah, yeah.

Govind Lotlikar - **32:57**

Okay. But, but you were able to see, right?

Aditya Sriram M - **33:00**

Yeah, but can you like try to elaborate it? So yeah, one second you opened.

Govind Lotlikar - **33:11**

Yeah. See this is the command that I gave, right?

Aditya Sriram M - **33:14**

Okay.

Govind Lotlikar - **33:15**

That were the incoming partners. Okay. And it gave me the same thing. It says the message was sent automatically with any time.

Aditya Sriram M - **33:24**

Super. Now going up. This is super actually. But actually during the demo day, how. How should we demo this one?

Govind Lotlikar - **33:37**

Okay, so I'm going to tell you exactly how we are going to do it. Because each of these steps not takes time, right? So if you actually see this, the first process, okay, this. This takes about two to three minutes.

Aditya Sriram M - **33:54**

Okay?

Govind Lotlikar - **33:54**

Okay, this takes about one minute. Okay. And this is on demand. So this doesn't take much time. But as how big the document is, it will based on that. So right now document is about 10 pages. So it's fetching from that. But this is more or less, you know, very instant correct. Okay, so let's. Let me. Let me change this to were the continuing partners. I need to execute.

Aditya Sriram M - **34:36**

Do you need to give that client.

Tanmay Bhowmick - **34:38**

Is equal to go in.

Govind Lotlikar - **34:40**

See, first time you have to give, right? Second time onwards you don't have to give it. The reason first time you have to give it is because AI needs to know, right. Which client we are talking about.

Aditya Sriram M - **34:55**

Understood.

Govind Lotlikar - **34:57**

Second time you don't have to give it. Okay, so let's just see this. See these are the names, the continuing partners.

Aditya Sriram M - **35:18**

So what I was thinking, if you see.

Govind Lotlikar - **35:20**

If you see these names are different. See there's Subhash over here, Deepak. Okay. And over here, there's Rajaram, there's Yashwan, there's Pushpa.

Aditya Sriram M - **35:30**

Okay, can you ask a different question? Like what is the summary of his case?

Govind Lotlikar - **35:36**

Yeah. Okay, it's triggered. Let's see here. Okay, this is summary of the agreement of client going related to partnership firm. The agreement pertains to admission, retirement and reconstitution within the partnership. So it's given that.

Aditya Sriram M - **36:19**

Okay,

Govind Lotlikar - **36:23**

So at the time of demo, okay, this is what we need to do. Each process, okay, we need to open in a different window. So first process, okay, we know we need to upload this file, right? Right. So we upload this file. Okay. And we say that, you know, now the processing is going to. It has started. This will take about two to three minutes since we don't have this much time. Okay, let me show you what happens once the process is completed. So on that next. On the next tab, you have. The process is already completed.

Aditya Sriram M - **37:01**

Okay.

Govind Lotlikar - **37:02**

Okay. And you show from there that. Now, see, now we've got the version one of the consolidated file.

Aditya Sriram M - **37:10**

Okay.

Govind Lotlikar - **37:10**

And in the version one, okay, these are the things that are available.

Aditya Sriram M - **37:15**

Okay.

Govind Lotlikar - **37:16**

Right. You're saying that, you know, these are these are the mismatches that are available. I can either accept and remove. Okay. I can. If I want, I can edit this. Okay. And once I have done this, I will save and export. Once I save and export, I am getting the final version of this file which will be fed into the, the rag. Right, so you can actually. Sorry. See, so you can actually, you know, just click on this. Okay. Save and export and see, will actually show you downloading the files. See? Are you seeing this?

Aditya Sriram M - **38:05**

Yeah, that's what. But in the web application, right, we should say save this document. Something like that. Once you click it, this document should go and sit in the. Yeah, in the version history.

Govind Lotlikar - **38:21**

Yes. So this will. This, this as. This file will go as version one. And this particular file which gets downloaded over here, See, these two files got downloaded, right? These three were downloaded just now. Right. These three will also need to go as version two and logs. Got it now, okay, so this is one small change that you'll have to do in the ui. Okay. Okay. Add a new feeder for the RAG input over here. Right. And do you want to. You might want to add one more for the chat, right? Because this is the N8 and chat. So we need a chat over there also in the ui.

Aditya Sriram M - **39:21**

Yes.

Govind Lotlikar - **39:22**

So one feeder interface for RAG and one chat interface.

Aditya Sriram M - **39:27**

Okay.

Govind Lotlikar - **39:29**

Okay. This is what we'll have to do Again, over here, I'll give a webhook. Okay. That webhook will drive the input directly to the chat over there in the ui.

Aditya Sriram M - **39:41**

Okay. Do you have the webhook details as of now?

Govind Lotlikar - **39:49**

It's not very difficult. I can, I can give it to you in 10, 15 minutes. I'll give you one webhook over here. Okay. In fact, I can add it just now.

Aditya Sriram M - **40:00**

Okay, so if you can share those details. Right. What I was thinking is I can start integrating it and then. Yeah, maybe we'll have another checkpoint today itself.

Govind Lotlikar - **40:12**

Yeah, no problem.

Aditya Sriram M - **40:13**

10, 30 and 30pm yeah, or maybe 10pm and then we can sync up again. We'll see how much of it is going as planned.

Govind Lotlikar - **40:27**

Yeah, See we now, you know, now we have a decent product to show.

Aditya Sriram M - **40:33**

Yes.

Govind Lotlikar - **40:33**

Okay, so if we, you know, try to refine it further, I think we'll be able to be in the race. Okay, so what I did not show you over here was over here. I can also give a voice command. Okay, so if I give a voice command. Okay, I'll give a voice command over here. Let's see if it works. Can you give me a summary of this agreement? Oh, I forgot to activate the flow. Once this becomes active now then I don't have to press it all the time. Right now it's inactive. Okay, that's why. So see, if it is text, it will take this route. This one. If it is voice, it will take this route. See, it's already taking this route. Are you seeing this? Okay, and then once it goes to the AI agent. See this particular node over here?

Govind Lotlikar - **41:57**

Now this is capturing the client name. Now I didn't have to tell the name of the client again, I've said that, you know, once I've given the client name that is fixed till a new client is specified. Okay, so now it is processing this and it will send me the information over here. See, this was the. Okay, so it responds to voice and it responds to text.

Aditya Sriram M - **42:33**

Actually what you have done is within the vector DB you have created one single instance of namespace with multiple colonies of cases. Case information. So this guy is going and localized, doing a localized vector search. Yes, yes, and retrieving all that information. Excellent. Okay, Nice. I think that's how it should be like for one. Now, for example, if you think of a scaled out scenario, right? Say if I have hundred advocates who are using a thousand cases, all the information is still going into the same vector VB Yes.

Govind Lotlikar - **43:27**

And see, for Each advocate, okay. We will have a different vector DP created. Like in our case, we've created legal aid. Right. Now, tomorrow, let's say that, you know, if there are 10 advocates, okay. Who are independent advocates, you know, if you remember, our target audience for phase one is either independent advocates or small advocate forms with two or three advocates.

Aditya Sriram M - **43:58**

Correct?

Govind Lotlikar - **44:00**

Right. So for each individual advocate we create an, a separate vector db, okay. So their data doesn't get mixed. For each advocate we create a separate workflow. So there will be a separate webhook which will be delivered for them.

Aditya Sriram M - **44:23**

Oh, okay.

Govind Lotlikar - **44:26**

So the mismatch is not gonna, is never gonna.

Aditya Sriram M - **44:32**

Understood. Okay. Okay.

Govind Lotlikar - **44:39**

And then comes the third kind of advocates, you know, who. Or paper use kind of a thing.

Aditya Sriram M - **44:51**

Right.

Govind Lotlikar - **44:51**

So for them we have this particular. But for them we'll have to kind of combine the name, the client name and the advocate name. Are you getting me in the name space? Okay. Right now it's Go, right. Considering Go is a customer of an advocate.

Aditya Sriram M - **45:18**

Okay.

Govind Lotlikar - **45:19**

But let's say if the advocate just wants to use paper use, he doesn't want to take the entire system.

Aditya Sriram M - **45:28**

Okay.

Govind Lotlikar - **45:30**

So you give him access as one user into our ui.

Aditya Sriram M - **45:36**

Okay.

Govind Lotlikar - **45:37**

And he will get identified by the namespace, which will be a combination of his name and the name of his club.

Aditya Sriram M - **45:50**

Okay?

Govind Lotlikar - **45:50**

Okay, got it. Now. That's a, that's a long way to go for considering the number of hours, you know, that we've put into it. We are like last minute study kind of a thing if whatever UI you created was one day before our meetings. Okay. Now whatever this improvement that I did, we, you know, I had no intention of creating that rag. The other day Sukin said that, you know, you need to create the rag. I want to see a wow factor. That's why then the rag came into the picture and this also came into the picture. The telegram bot.

Aditya Sriram M - **46:42**

Excellent. Sure. Anything else?

Govind Lotlikar - **46:53**

Yeah. So what I was saying was that we'll also take a look at the UI ones. But now since Tanmay has done only up to videos. Okay. What we could do is, you know, have him create a couple of videos. Okay. Which we can put on the landing page.

Aditya Sriram M - **47:18**

That's what I was also thinking.

Tanmay Bhowmick - **47:23**

Okay, I'll try because I, I'll try. How much time do we have for the videos?

Govind Lotlikar - **47:32**

We've got about four or five days. But you know, video refinement is also something that, you know, you'll have to do two or three times in the first time. It's not going to come accurate.

Tanmay Bhowmick - **47:45**

What we want for the video, like I also go through the classes and what exactly we need for the videos.

Govind Lotlikar - **47:52**

So something like you know, problem statements of the advocates.

Tanmay Bhowmick - **47:57**

Okay.

Govind Lotlikar - **47:58**

Okay. So the. The. The problem statement is that currently the advocates are facing. Okay. Which is our base for doing this one was that you know these PDFs are not non searchable.

Tanmay Bhowmick - **48:12**

Okay.

Govind Lotlikar - **48:14**

Right. You can't search to it because they are they photo images. Uhhuh. Okay. Going through agreements takes a very long time.

Tanmay Bhowmick - **48:23**

Okay.

Govind Lotlikar - **48:23**

They have to rely on. On their staff most of the times.

Aditya Sriram M - **48:27**

Okay.

Govind Lotlikar - **48:28**

Okay. And since they have to rely on their staff, the accuracy is a concern. Because juniors, although they have to be trained, they may not do it as diligently as. As the person himself.

Aditya Sriram M - **48:42**

Okay?

Govind Lotlikar - **48:43**

Right. Juniors have to be trained and after training sometimes they want to leave the job. They want to go for better prospects.

Aditya Sriram M - **48:51**

Yes.

Govind Lotlikar - **48:52**

So training wasted. And one more big issue that they're facing is see today you know, law firms are not restricted to a particular area, particular geography. Right. Like an advocate in Mumbai can get cases which are related to Bangalore also or maybe you know, even in Delhi. Okay. Delhi is still fine. But when it comes to agreements in Bangalore they are written in Canada. Okay. Now they don't know how to read these. And this is a practical problem that advocates even in Mumbai are facing is that the. The new joine. They don't know how to read mar. Lot of them have come from North India. Okay. So they know Hindi but they don't know Marati. Okay. So our system is translating it into my. Into English.

Tanmay Bhowmick - **49:58**

Okay.

Govind Lotlikar - **50:00**

Okay. So the report will get generated in English.

Tanmay Bhowmick - **50:03**

Oh, makes sense.

Govind Lotlikar - **50:06**

You know, otherwise then they have to send it to one person who will read it, will summarize it will get you know, all the details and all. Okay. But instead if the document is clear, we. We get a very good percentage of accuracy. Yeah.

Tanmay Bhowmick - **50:26**

For that you know I. When you have been telling me, I just want to add one more thing.

Govind Lotlikar - **50:30**

Go in.

Tanmay Bhowmick - **50:31**

So basically the accuracy was 70, right. With the document which we have been seeing, right?

Govind Lotlikar - **50:37**

Yeah. Yeah.

Tanmay Bhowmick - **50:37**

So when we are seeing accuracy, which means that Our system was 70% accurate to read the file, right?

Govind Lotlikar - **50:44**

Yeah. The OCR. The OCR part was 70 accurate.

Tanmay Bhowmick - **50:48**

Yeah. It is our system accuracy, right?

Govind Lotlikar - **50:50**

Yes. Yes.

Tanmay Bhowmick - **50:51**

So can we add one more feature? The way you have added where you are writing. These are the suggestion which needs to be corrected. And this is the suggested one. You can apply it on the go. Can we also tell the user that which all 30% sections. Maybe it's a stamp, maybe it's something else. Can just highlight those sections so that they can also like proofread by their own eyes. They have also.

Govind Lotlikar - **51:17**

Yes, that's. That. That's what's going to appear. Wait, wait. Let me. Let me show you that I had sent one on. I had sent a previous version to Aditya. Okay. So in that you'll see it later. Are you seeing this?

Tanmay Bhowmick - **52:14**

Yes.

Govind Lotlikar - **52:16**

So see, this is what Mistral gave. This is what PDF Vector gave. Okay. And it has automatically resolved it. Huh?

Tanmay Bhowmick - **52:27**

Yeah, I. I understand about the resolution. I was saying that the 30% lag in our accuracy. If we can show that this was. This is. Please validate and confirm the correct way. Yeah, makes sense.

Govind Lotlikar - **52:41**

Yeah. See.

Tanmay Bhowmick - **52:42**

Yeah, this is. Yeah, that's good.

Govind Lotlikar - **52:43**

Yeah.

Tanmay Bhowmick - **52:44**

In.

Govind Lotlikar - **52:44**

In the. In the next version. Okay, it. It gives me a radio button over here. Should I select this one? Should I select this one? Or there is a text box over here. Should I just write my own statement? Okay, so these are the ones that will. That. That are actually taking up that 30% of it.

Tanmay Bhowmick - **53:06**

Okay. Do we have problem statement document or something related to that for this?

Govind Lotlikar - **53:17**

Yeah, we. We had our paycheck.

Tanmay Bhowmick - **53:20**

Yeah. Can you show me that? I'll try to convert a script and try to create something. Whatever I can.

Govind Lotlikar - **53:28**

Yeah. So also once again, I'll also open that which kind enough to have shared.

Aditya Sriram M - **53:36**

The Pitch deck with you. I can reshare.

Tanmay Bhowmick - **53:40**

Yeah, yeah.

Govind Lotlikar - **53:43**

Okay.

Tanmay Bhowmick - **53:46**

Is that outscale presentation?

Aditya Sriram M - **53:49**

Yes.

Tanmay Bhowmick - **53:49**

Okay.

Govind Lotlikar - **53:50**

Yes. You see, this is the one.

Aditya Sriram M - **53:57**

This is Pitch plus demo deck, the recent one.

Govind Lotlikar - **54:22**

Yes. So see, this is the one that I told you. Right. Legacy agreements, you can't search through them.

Tanmay Bhowmick - **54:27**

Okay.

Govind Lotlikar - **54:29**

Right. Manual review is very slow. It is error prone because you have to depend on juniors.

Aditya Sriram M - **54:37**

Yes.

Govind Lotlikar - **54:38**

People and juniors are trained. Juniors are trained. But then they. They leave the system. So now you have to train the new person, whereas our system is trained. Okay. Now if I. If I'm asking a new joinee to just go through this particular document and check the original document and confirm whether this is correct or this is correct. Okay. For that he doesn't need intelligence. Now I am putting all the intelligence into the system. He just has to, you know. Now in the new one we've got those buttons, right? Accept and move on. So once you create a click on accept and let's say I select Mr. And I say accept and confirm, this particular box will go off and this document becomes version two of the document.

Tanmay Bhowmick - **55:37**

Yes.

Aditya Sriram M - **55:38**

Okay.

Govind Lotlikar - **55:39**

And One point over here that I told you was related to regional languages that is missing. But you can add that point over here and see how you can elaborate on the functionality. Okay. Now since you are from a marketing background. Okay. This is the one where you know, this is our primary audience. Right. So this is a primary audience that we are talking about. Independent practitioners. Okay. And small law firms. Correct. So you could probably, you know, have a marketing plan and. And talk about it for a minute or so.

Tanmay Bhowmick - **56:23**

Perfect.

Aditya Sriram M - **56:24**

Perfect.

Tanmay Bhowmick - **56:24**

Perfect.

Govind Lotlikar - **56:24**

Otherwise. Yeah. Otherwise you're just going to be standing over there.

Tanmay Bhowmick - **56:28**

Yeah, I don't want to do that.

Govind Lotlikar - **56:30**

Yeah. So.

Tanmay Bhowmick - **56:30**

Yes.

Govind Lotlikar - **56:31**

Then your value addition is not going to be seen. So if you can talk about the marketing plan on how we plan to, you know, take this to the market, you could talk about this slide.

Tanmay Bhowmick - **56:49**

I'll try to create a strategy, kind of a 1 minute, 2 minute marketing go through. Like how you're going to position this product and how you're going to reach out to the audience.

Govind Lotlikar - **57:00**

Correct. So again I. I'll be talking about these problem statements of the beginning. Okay. Then the demo part, the UI demo will be done by Aditya. Okay. So Aditya, you'll have to have all those screens ready.

Aditya Sriram M - **57:21**

Yeah.

Govind Lotlikar - **57:22**

Yeah. So we of course will practice the thing. Right. Yeah. Next week we'll need to spend more time.

Aditya Sriram M - **57:30**

Sure.

Govind Lotlikar - **57:31**

On this. So you'll have those screens ready and. And you'll show the UI for telegram. I may have to, you know, just come in again to show the how because the bot is, you know, has been captured into my this. But if you are comfortable showing the bot. Okay. I can add your. You know, you can give me the bot. And see it's. It's very easy to create a bot. You have to go into bot father. Okay. And just say that new bot. Okay. Then I gave it the name Leah. The reason why I gave it Leah was I wanted AI. You know, legal AI. So Leah was the name that came up. So what ChatGPT said is you can call it legal Intelligent assistant.

Aditya Sriram M - **58:41**

Nice.

Govind Lotlikar - **58:43**

Okay. That's how Leah. So this is where we are so far. So on the next steps, Aditya, I need to give you the webhooks.

Aditya Sriram M - **59:04**

Yes.

Govind Lotlikar - **59:06**

Right. And. One is the webhooks. And I need what else? I need to check the. The report.

Aditya Sriram M - **59:29**

Yes.

Govind Lotlikar - **59:30**

All those, all of those need to reflect over there whether it is. Whether it is auto resolved or whether it is an issue that human in the loop needs to confirm. All of them need to be shown over there. Let the human in the Loop confirm. Right. Because we are talking about accuracy. Once the human in the loop has confirmed, the document becomes 100% accurate. So. And we'll also have to add three or four clients. Okay. To show different kind of reports if. If they are asked for. This is again something that Sukhin suggested that you need to have three or four lines over there. Right now we just had one, right? Yeah, he said you need to have three or four lines. So we'll do that. I mean, we'll anyway have to run the entire workflow. Right.

Govind Lotlikar - **01:00:41**

So when we do that, then it'll automatically. We'll have three or four entries over there.

Aditya Sriram M - **01:00:49**

Yeah, yeah, should be fine. Okay.

Govind Lotlikar - **01:00:54**

And Tanmay needs to work on the video creation. So the videos could include problem statements from lawyers. Okay. The videos could include solutions that we have identified that for this problem there's a solution. This problem. This is. I mean, you're the marketing guy, you understand better, right?

Tanmay Bhowmick - **01:01:18**

Yes.

Aditya Sriram M - **01:01:20**

When is it, when is this next review going to happen with chicken?

Govind Lotlikar - **01:01:27**

Do we have anything today?

Aditya Sriram M - **01:01:30**

No, I have. I did not see any message from Karthik.

Govind Lotlikar - **01:01:34**

I think.

Aditya Sriram M - **01:01:37**

They're giving us time to work on the products.

Govind Lotlikar - **01:01:41**

Okay. So I don't think there is another.

Aditya Sriram M - **01:01:48**

This is break weekend. Hope your preparations for the demo day are going good. Please note we do not have any planned session for this week.

Govind Lotlikar - **01:01:58**

Right. So we've got exactly two weeks. Okay. To refine, improve, whatever. You know, See, one is that we need to create that hype. Okay. That, that wow factor needs to be seen. Okay. Right now I. We've got the voice commands enabled through Telegram. Okay. But I am also trying to see if there is something that we can do using with voice.

Aditya Sriram M - **01:02:35**

Voice reply.

Govind Lotlikar - **01:02:37**

Yeah, something like that. If I can do that. Okay. But for the voice interaction, okay, we need to have maybe a Python code running which is constantly monitoring the microphone. Okay. Because you need to activate it, right? So you need to activate the agent, you know, and it's. It's very difficult.

Aditya Sriram M - **01:03:18**

No, no, don't worry about how to do it. Just tell AI what we need. It will figure out how to do it.

Govind Lotlikar - **01:03:33**

Show you something that I tried. And Condo's gone into hang.

Tanmay Bhowmick - **01:04:04**

Meanwhile, go. Can you also let me know that you just required a video or should I just start working on the marketing strategy for this product? Because, you know, I believe. See, you know, the smallest of the feature looks very good when you market it and show it in a very dramatic way, to be very honest.

Govind Lotlikar - **01:04:23**

Right? Correct. Correct.

Tanmay Bhowmick - **01:04:25**

So what I feel like the wow factor here. See being into this project but you haven't seen the demo and I can see that anyways the product is wow. I'm telling you. It's if there is nothing like that or maybe it's like that but it's very expensive in the market related to that. It is a good thing what we have created. I think that we just need to market it in a way that people also connect, right? So we have to feel like this is what it is going on and this is how it works. The pain point of advocate.

Govind Lotlikar - **01:04:57**

Right. So there is one more thing, you know, which I was thinking about adding. Okay. And Aditya, you may not have to add anything in the ui. It's like see there are fixed kind of agreements, right? You know like there's a home loan agreement, there is a home purchase agreement, there's a lease agreement. Okay. These agreements are more or less, you know, the templates are fixed. Okay. So if we can have these agreements in let's say a database or maybe on Google Drive and a new client is coming for a home loan agreement. Okay. We just, you know, the Advocate takes those 5, 6 details that are required from the two parties. Like you know, the other card, the address, the age name, okay. And directly from Telegram, okay. It tells that please create a home loan agreement for this client. Okay.

Govind Lotlikar - **01:06:20**

So then the AI will pick up that template and add the information of this particular client and send that agreement on mail.

Tanmay Bhowmick - **01:06:35**

So basically you also want to create a kind of free tools. Not free tools, a tool where customer can you know, add in their details and we can share the agreement itself.

Govind Lotlikar - **01:06:47**

Yeah. So that opens up your target audience to people who also want to have direct customer. Basically.

Tanmay Bhowmick - **01:06:55**

D2C we are also going to see, Yeah, the B2B one are the advocates. And giving out these kind of products will reach out to the audience like the normal audience. Like a person who wants the rent agreement or a house agreement or anything to that. Right?

Govind Lotlikar - **01:07:18**

Correct, Correct, correct.

Tanmay Bhowmick - **01:07:24**

And also like just I wanted to know go. How much time it requires to create a rag based informational based chatbot.

Govind Lotlikar - **01:07:36**

See if you have the experience to create ragbots, maybe three or four days is enough for a basic feature. Okay. But if you're talking about the entire UI that needs to get created along with the bot.

Aditya Sriram M - **01:07:56**

Okay.

Govind Lotlikar - **01:07:56**

And then you also want these other features like Telegram and all then very easily two weeks full time. Okay,

Makes sense.

Tanmay Bhowmick - **01:08:08**

You know, being a normal person is here. I understand that. I also doesn't know a lot about these agreements, these advocate terms, these. All of those things.

Govind Lotlikar - **01:08:20**

You know, maybe a couple of videos you could create using. You know, educating how to use the system.

Tanmay Bhowmick - **01:08:31**

Okay.

Govind Lotlikar - **01:08:32**

Maybe in another two or three meetings you'll also understand what exactly is being done. Right.

Tanmay Bhowmick - **01:08:38**

Okay. I also try to find out the tools which can make these videos properly and let me see how it's gonna go.

Govind Lotlikar - **01:08:49**

Yeah. Since you've done videos, this is your chance to practice.

Tanmay Bhowmick - **01:08:53**

Yep.

Govind Lotlikar - **01:08:54**

Real life scenarios.

Tanmay Bhowmick - **01:08:56**

Like I haven't totally done it, but yeah. I have learned the image generation and getting into what we should need to do next. Well, I. I'll. I'll do it, man. Anyways, I have to learn, right. So I'll do that.

Govind Lotlikar - **01:09:11**

You want to show the ui?

Aditya Sriram M - **01:09:14**

Yeah. Try to use the replic once they have introduced a new feature of creating videos.

Tanmay Bhowmick - **01:09:21**

What tool?

Govind Lotlikar - **01:09:22**

What tool replic.

Tanmay Bhowmick - **01:09:24**

Can you. Can you share it on WhatsApp as well?

Aditya Sriram M - **01:09:26**

Yeah, sure.

Tanmay Bhowmick - **01:09:33**

The UI part a marketer see, you know, the UI is the only one. Only thing which a marketer want to see.

Aditya Sriram M - **01:09:46**

Okay. So this is the current landing page. So here it shows the three steps that we are trying to do. I've asked AI to create this. He says see it in action. It gives the three steps. Crop the document A analyzes everything get validated. This will change now. This will be enhanced to whatever we are going to support now. Rescues advocates love what we do. Maybe somewhere here we can before this will. Before success stories. We can have the pain points that video comes in and then we can have what advocates have are talking about the current product and the pricing. This is again debatable. We can only for the sake of completeness this.

Govind Lotlikar - **01:11:18**

Okay. Yeah. So. And one more thing was instead of start of the trial now that link is also broken. Right. So you'll need to add. No, add your name to wait list. Okay.

Aditya Sriram M - **01:11:34**

Okay. Add your weight.

Govind Lotlikar - **01:11:37**

You look at what Sukhin had created. Right. Add your name to wait list. Which takes you to the. The form. A name, number, email address. Yeah,

Aditya Sriram M - **01:11:52**

This is sign in. So I've changed from green color to dark blue. Looks more professional now. And so this is the dashboard for the advocate. All the documents show up here.

Govind Lotlikar - **01:12:15**

So over here, you know, over here what he had suggested was supreme had suggested was that see saying that when you go to chat GPT. Okay. Are you. Are you seeing a button where you know you have to click new chat then it goes to the new chat or do you see the. The chat window directly in front of you.

Aditya Sriram M - **01:12:36**

Yes. And so you have to work on that.

Govind Lotlikar - **01:12:39**

Yeah. So that is what needs to come over here. Okay. The dashboard can go on demand.

Tanmay Bhowmick - **01:12:45**

Yeah. Can we also do one more thing for the video? But I just clicked on whenever a person is gonna see this dashboard. We can also show a kind of a tutorial video to create a gamification into the product that just watch the video or maybe a automated cursor by giving a kind of a step by step guide like click on Dashboard, then click here. A kind of a lesson which we do right in eight step. Click next, click next and completely the onboarding part. Can we create something like that as well?

Aditya Sriram M - **01:13:16**

Okay.

Govind Lotlikar - **01:13:17**

Yeah. If we can take screenshots into PowerPoint. Okay. And you save it as MP4 file. Okay. The video automatically gets created.

Tanmay Bhowmick - **01:13:30**

Oh, which tool I can use for that?

Govind Lotlikar - **01:13:32**

PowerPoint. PowerPoint.

Tanmay Bhowmick - **01:13:34**

PowerPoint. Like you're saying that taking the screenshot.

Govind Lotlikar - **01:13:39**

Okay. And you, you put labels, click here and go to the next. You know, once you click here, then you go to the next slide. Then you show the next slide. You say click here.

Tanmay Bhowmick - **01:13:52**

We have all the slides.

Aditya Sriram M - **01:13:53**

Go.

Tanmay Bhowmick - **01:13:53**

Do we have all the slides?

Govind Lotlikar - **01:13:56**

No, not yet. So once Aditya completes this, then we'll have it.

Aditya Sriram M - **01:14:03**

Okay. Okay. So each advocate can have clients, multiple clients, cases and all the documents related here. So based on our earlier discussion, right. So using AI, I'll get all what is pending now for me to take up as an action item. I'll convert that into a requirement and feed it into my windser so that it'll start developing page wise.

Govind Lotlikar - **01:14:41**

Yeah. So over here, you know when you click on that button now this screen that comes up now, this is supposed to be on the previous one. That's what he's saying. Because now you directly know what is to be done. The first thing that needs to be done is you need to drop. But from the dashboard you don't come to know what is the first thing that needs to be done.

Aditya Sriram M - **01:15:09**

So you want a small, on the right hand side itself option to upload all the documents, right?

Govind Lotlikar - **01:15:16**

No, no. Directly in front is saying. Oh yeah. That, that page itself has to be the first one. First page you can say welcome back advocate Rajesh Kumar. Okay, that is fine. Then on the, instead of this dashboard showing. Okay. See the relevance is that when will the advocate go to this particular site? When he wants to feed this his documents, right?

Aditya Sriram M - **01:15:47**

Yes.

Govind Lotlikar - **01:15:48**

He's not interested in seeing how many documents he has processed. Okay. So we need to reduce the number of clicks for this particular client in as few clicks as possible. So the first screen itself is like chat. GPT's chat window. Directly. Directly. Start chatting. So directly upload your file over here. Okay. And then once he's uploaded, okay. And you take him to the screen where you, where he says that. Okay. Start process. Okay. So that's the second screen. And when he clicks on, after he clicks on, process. Okay. Over here, instead of showing these many tabs, okay. You show the report directly over here.

Aditya Sriram M - **01:16:46**

Okay.

Govind Lotlikar - **01:16:48**

Okay. And so you see that person gets to see. Okay, the current accuracy is 69. So he needs to work on the remaining. So on that second tab you can have only two tabs over here. One is showing you the report and the second tab is to improve the accuracy. Human in the loop. So when he goes to that tab over here, you need to show him side by side this PDF and on the other side he needs to see the document that has been created along with the mismatches. Okay. So while he approves those mismatches one side, he can see this document.

Aditya Sriram M - **01:17:38**

Okay.

Govind Lotlikar - **01:17:39**

Okay. And then you'll probably need to have some button like full screen mode. So because this left hand and the right hand side is of no relevance. Right. When he's, he needs as much space as he can to go through these documents side by side.

Aditya Sriram M - **01:17:58**

Okay. Okay. Let me see how wind will take it.

Govind Lotlikar - **01:18:10**

Yeah.

Aditya Sriram M - **01:18:10**

So I, I feel that we are in a crucial state from here. Every change that goes in should be stable so that we can.

Govind Lotlikar - **01:18:20**

Yes.

Aditya Sriram M - **01:18:21**

Revert back to the like previous known state.

Govind Lotlikar - **01:18:27**

Yes, yes.

Aditya Sriram M - **01:18:28**

We should not mess up things now.

Govind Lotlikar - **01:18:30**

You know, this is actually what happened with me yesterday. My, my perplexity. Okay. Before one year expiry, it started telling me that, you know, you've already exhausted your usage for the whole year.

Aditya Sriram M - **01:18:49**

Yeah.

Govind Lotlikar - **01:18:50**

I was like, you know, what do I do now? Because publicity was giving me some good troubleshooting using the sonnet. Okay. But this chat GPT is not as good as for troubleshooting. Strategy is bad. Claude is good.

Aditya Sriram M - **01:19:18**

Yes.

Govind Lotlikar - **01:19:18**

So then I, I reached out to Karthik. What can I do? Karthik replied by saying that I'm in a session, I can't talk right now. Then I, then I logged into Claude. Okay. And started using Claude. So after every 15, 20 minutes, Claude was telling me that, okay, you've exhausted your usage now you can again chat after three hours. So then I logged in with my other email id so I had three email IDs I you know I was going through each email id just to complete this.

Aditya Sriram M - **01:19:58**

Thanks.

Govind Lotlikar - **01:20:01**

A little hectic yesterday but yeah at least now we have a way forward try to streamline the things okay and as Tanmay mentioned more than the technical part okay More than the functionality if we can market the product okay that will get us more visibility yeah right okay so when do we meet next so if.

Aditya Sriram M - **01:20:41**

I have these things the webhooks.

Govind Lotlikar - **01:20:44**

Right I'll give you.

Aditya Sriram M - **01:20:46**

I'll give you now then tonight 10 o' clock at least in the chat I'll update what is the status where we are if it is a good enough then we can meet otherwise tomorrow same time we can sync up.

Govind Lotlikar - **01:21:03**

Okay okay yeah.

Aditya Sriram M - **01:21:09**

Cool thank you guys.

Govind Lotlikar - **01:21:11**

Okay thanks guys any points you want to say.

Aditya Sriram M - **01:21:23**

I'm ready. Okay I think he dropped by Gohin.
